Hardware & Software

Your business is unique and this means that so too are your IT requirements. Choosing the right hardware and software from the outset is a vital business decision and this can be influenced by many factors which can include:

- Number of users – now and in the future
- The size of your premises
- The location of your premises
- Do all of your users work on one site or split over many?
- Restrictions placed upon you by membership of any trade bodies or other compliance issues
- Requirements to use any bespoke or industry specific software
- Amount of data stored
- Backup options available to you taking in to account all of the above
- Should the working data be backed up locally or to the cloud, or both
- Should the working data be stored on site or offsite

Armed with some answers to the above, we are able to use our broad supplier network, which we have built up over the years we have been in business. We are not tied to any specific manufacturer so can choose the product that is right for your needs. Products include:

- Servers
- NAS devices (Network attached storage)
- PC's, Laptops and Tablets
- Networking equipment including switches, firewalls and routers
- VOIP Telephone Systems
- UPS Battery Backups
- Server software and licencing – either OEM or Open Licence
- Office 365 Licencing
- Microsoft Office standalone product
- Anti-Virus Products
- Encryption Products
- Onsite backup devices and software
- Offsite backup services
- Email hygiene services

- Email protection system
