Networking Services

The way your business currently operates and the way you expect it to grow will dictate the design of your network. Even with the growth of cloud solutions, the machines in your office will still invariably rely on an Ethernet network. It's important to get this right from the start; all too often have we found an office which has started with two or three users and trailing cables, grow to a dozen or more users with a horrible unmanageable mass of cables with no structure, labelling or method of tracing what is plugged in to what. Inevitably this lack of planning will have a consequence to business continuity.

We've made our name in gathering a thorough understanding of what our clients do, how they do it and designing a bespoke network solution with scalability and progression in mind.

As a provider of networking solutions from a range of vendors including ZyXel, Draytek, Netgear and DLink to mention but a few, we are able to offer a complete range of network support services, hardware and wireless products.

For further information, please call Sound Networks on 01225 701650.
