VOIP Phone Systems

Sound Networks can provide Voice Over IP telephone systems for your business. Not only can Voice Over IP telephone systems provide a significant monthly cost saving over a conventional analogue or ISDN version, they can also provide the facility for remote working. Coupled with our remote access options for IT and fast broadband services, remote working is becoming more and more viable for many people.

We are able to provide VOIP telephone systems as either a cloud based or locally sited PBX version. Both have their strengths and weaknesses and the size of your business may well dictate which VOIP system is right for you. It's important to choose the right system as there are many on the market and not all measure up.

If you want to know more or would like a cost saving analysis over your existing system please do give us a call on 01225 701650.
